ENIAC DISCOUNT STRATEGY

Analysis Report

Core Question: Is discounting beneficial to the business?

Board Concern: More orders but falling revenue — positioning at risk

Executive Summary & Data Quality Assessment

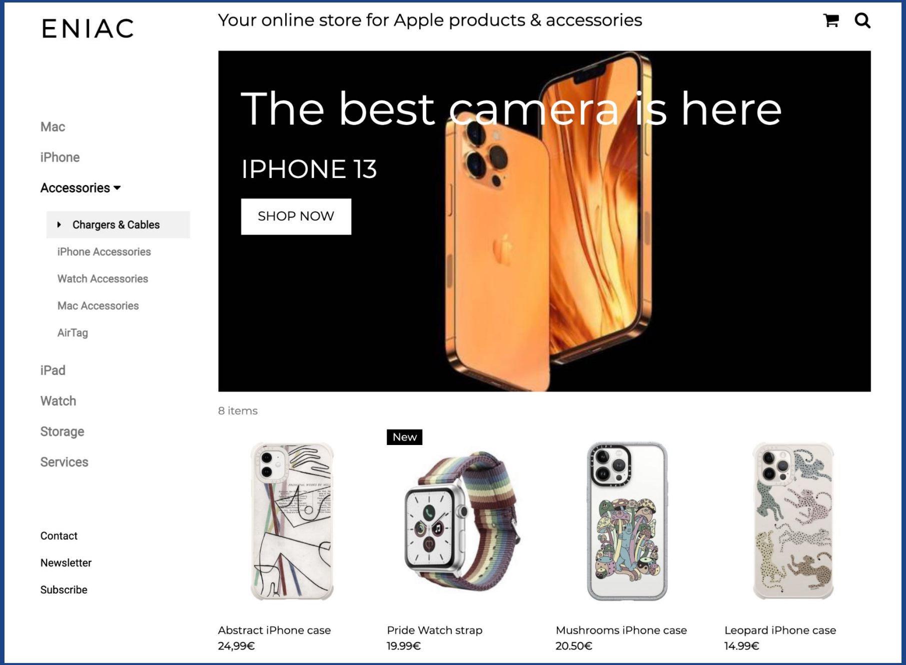
- The raw data made our sales volume look **26% higher** than it actually was
- We built a cleaning process to turn those broken files into accurate financial records

Our 3-Step Data Cleaning Process:

Step 1: The Price String Repair

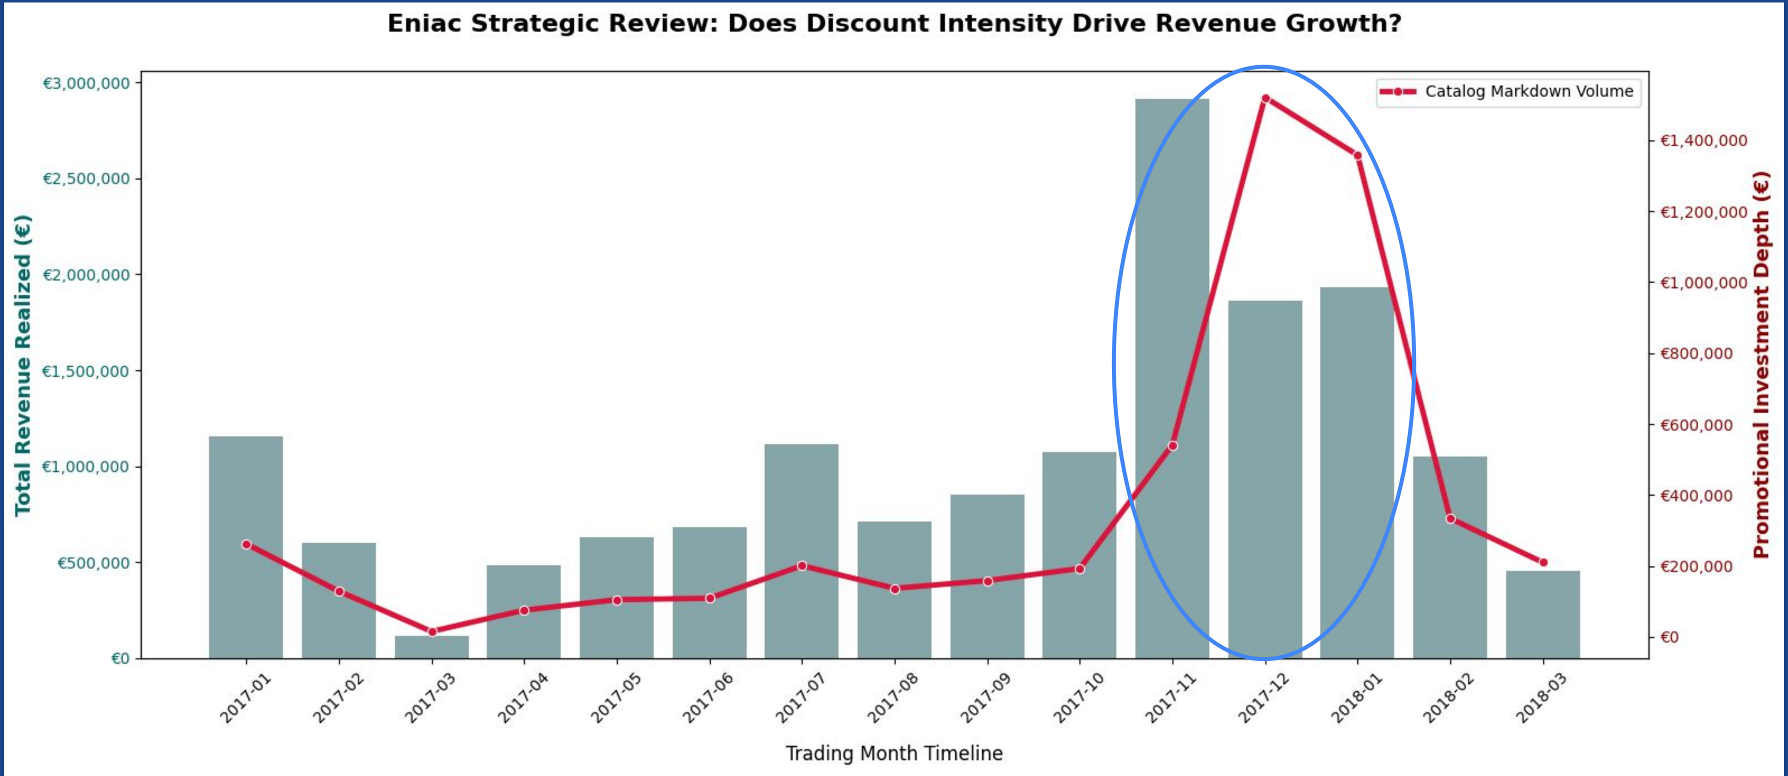
Step 2: True Revenue Isolation

Step 3: Taxonomy Optimization



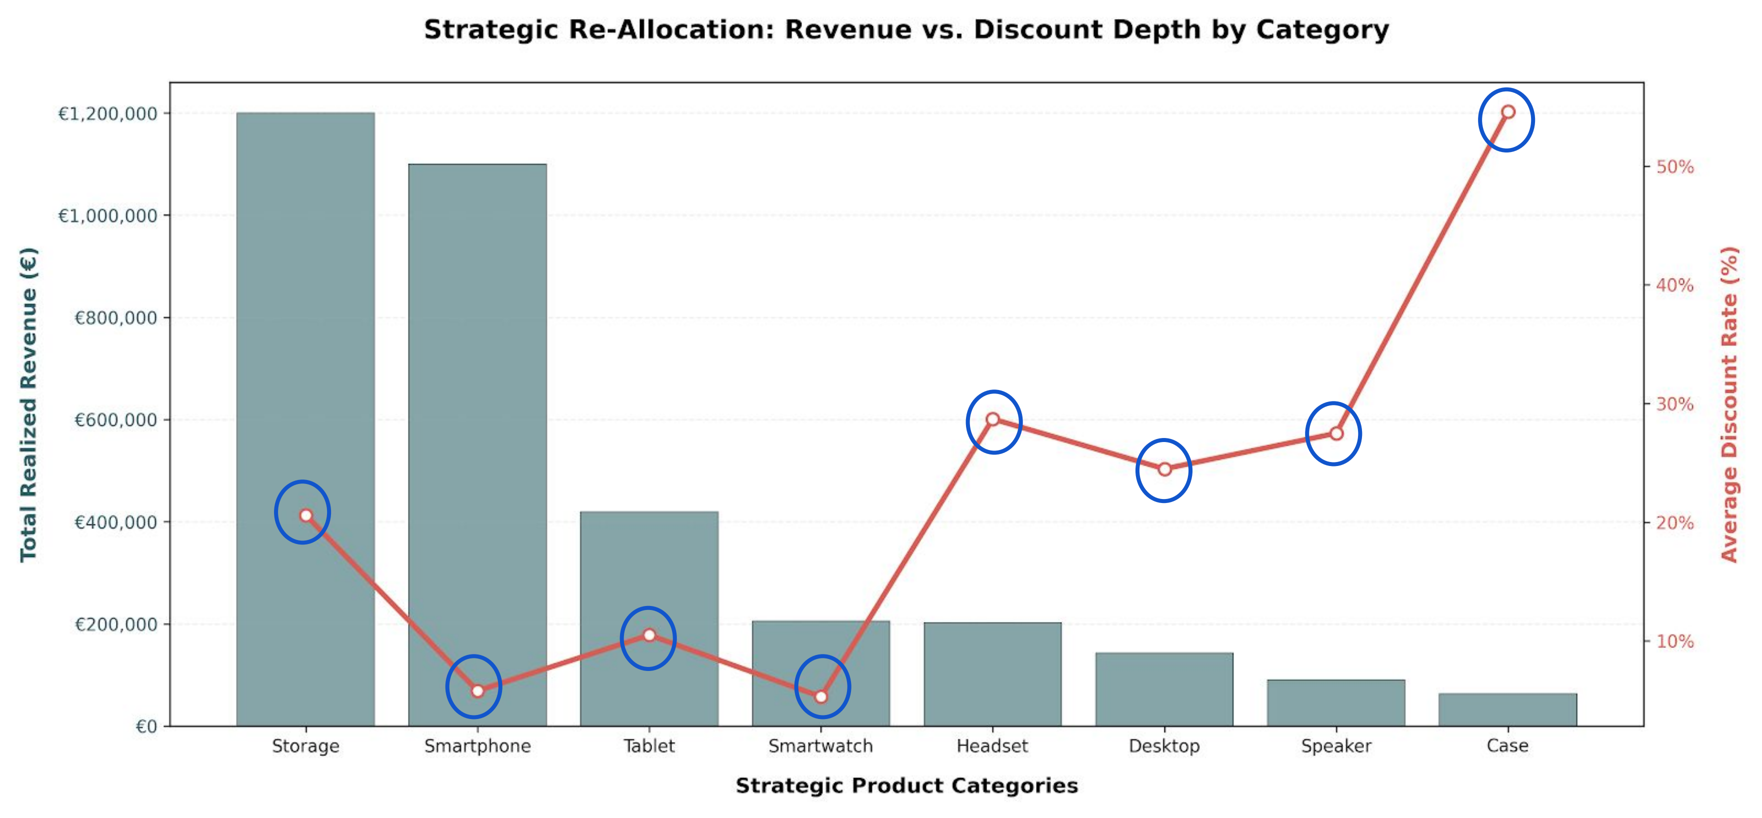
Macro Performance: Does Discount Intensity Drive Revenue?

Promotions: short-term customer acquisition ✅ permanent engine for revenue growth ❌



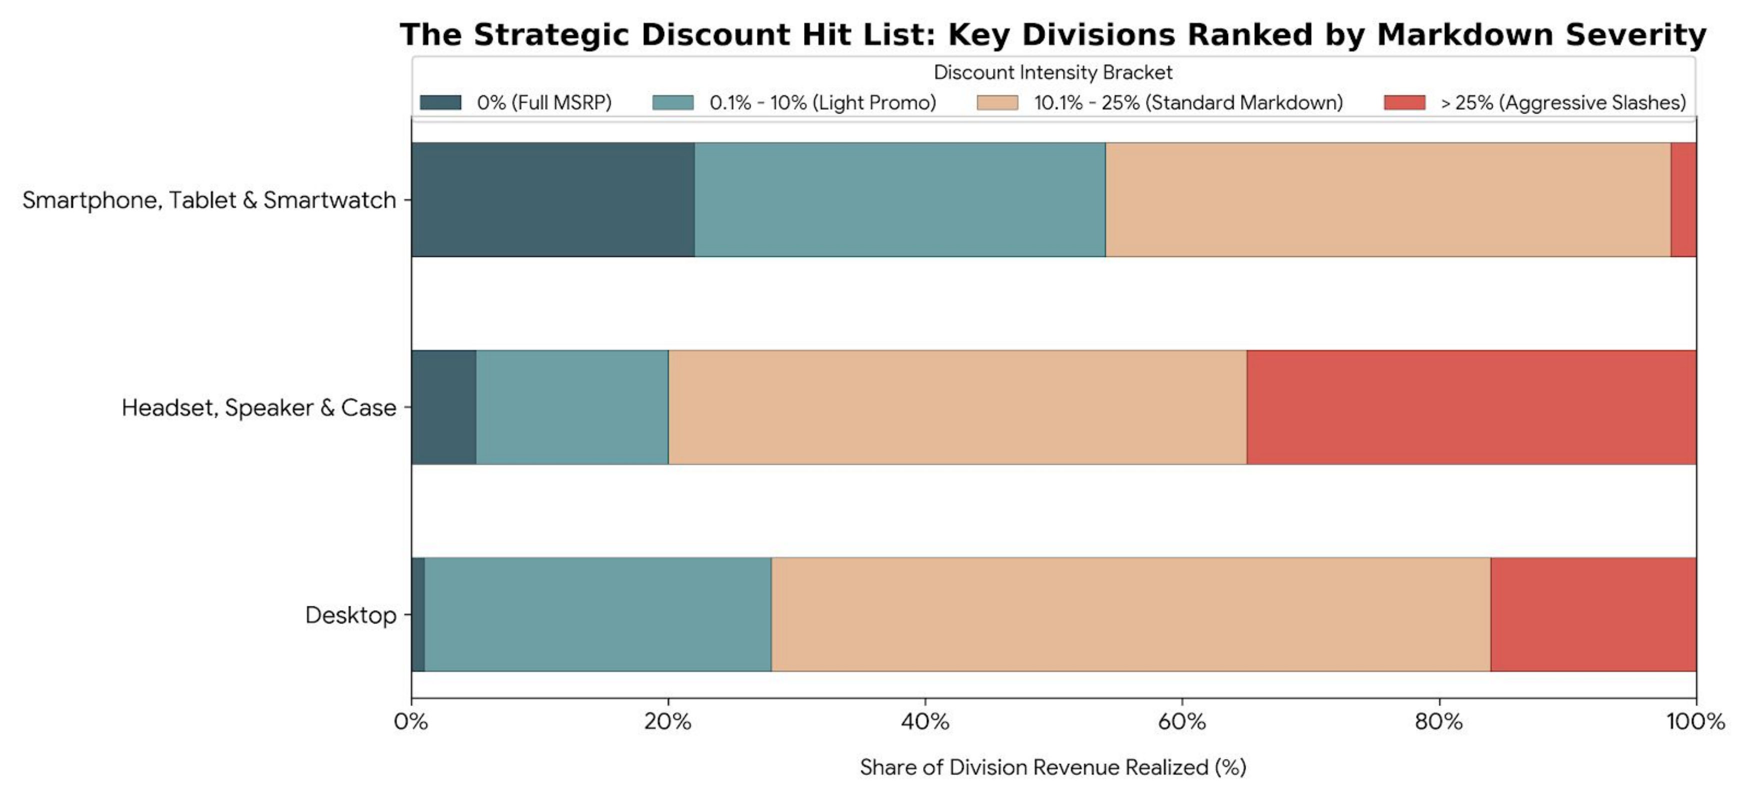
Strategic Re-Allocation: Revenue vs. Discount Depth

We do not have a demand problem; we have a **promotional allocation problem**

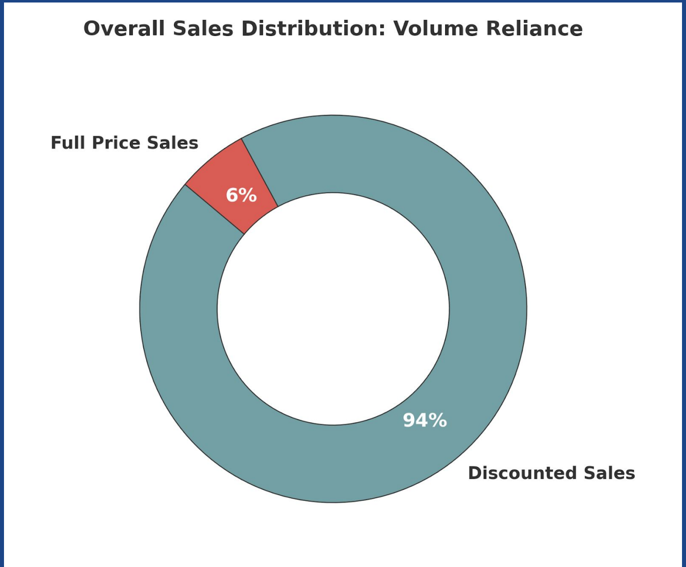


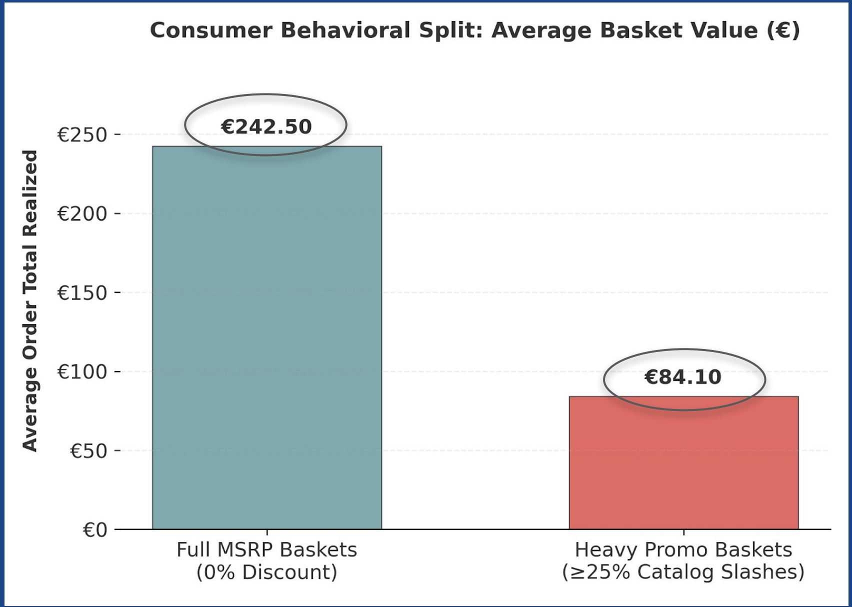
Micro Drill-Down: The Strategic Discount Categories

We are discounting products that don't need it, while giving away the items that drive our profits



Key Findings





Our final metric is a major wake-up call:

94% of our items are sold on sale
leaving only **6%** at full price

The Big Opportunity:

Customers who pay full price spend **significantly more per order** than bargain hunters

Recommendations

📊 Set Price Floors for Hardware

Put a strict 5% maximum cap on discounts for core Desktop hardware after November

✅ Use Product Bundles

Bundle with discounted Headset, Speaker & Cases to clear out stock without losing our main profit margins

🏆 Stop Winter Sales after November

Completely stop all broad, store-wide discounts from December through February

Thank you.
